Over 80 Years of Experience

For over 80 years, Andreas-Bürsten GmbH has been your reliable German manufacturer and wholesaler of brooms, brushes, and cleaning supplies.

Sustainability meets quality: The products in this series feature blocks made from recycled plastic and are equipped with edge protection made of bio-based TPE rubber.

High-quality PBT filaments, partially made from recycled material, ensure effective yet gentle cleaning. These exceptionally durable brushes are ideal for cleaning cars, trucks, buses, tractors, boats, solar panels as well as for glass cleaning. They offer high resilience and reliable cleaning results, even in demanding applications.

Maximum cleaning with low water consumption

Our **oval washing brushes** enable effective yet gentle cleaning.

What makes them special is that water flows directly into the cavity of the brush body and emerges evenly through each individual bundle of filaments. This removes dust and dirt from the filaments and the brush cleans itself whilst in use.

Recycled 80%

Vehicle brush high/low with waterfeed

240 x 83 mm, trimsize 55 mm, PBT 0.30 - soft flagged, max. 100 °C.

Item no. T220242 Pck. 6

Item no. T550616 Pck. 16

Brushes with soft & flagged filaments

When brushes are flagged, the outer ends of the individual filaments are split mechanically. This creates numerous fine micro-tips. The flagged PBT filaments can absorb and retain water and cleaning agents more effectively, and release them in a controlled manner. This enables uniform and efficient cleaning. These brushes are ideal for cleaning delicate surfaces such as car paint, glass, plastic or solar panels.

Perfect for gentle and thorough cleaning.

Recycle 82%

Upholstery brush, black

125 x 55 mm, max. 100°C, trimsize 26 mm, PBT 0.30 - soft

max. 100 °C

Item no. T800006 Pck. 12

High-quality products made from recycled plastic

Sustainable production processes are an important part of our daily operations.

Our plastic products meet high quality and industry standards and are produced, amongst other things, through the recycling of household and industrial waste.

In this way, we return valuable raw materials to the production cycle and make an active contribution to a more responsible use of resources.
